

Excimer laser resonator with high spectral purity output beam - has filter between beam widening device and exit mirror

Patent Number: DE4029687

Publication date: 1992-04-02

Inventor(s): LOKAI PETER (DE); BASTING DIRK (DE); KAHLERT HANS-JUERGEN (DE)

Applicant(s): LAMBDA PHYSIK GMBH (DE)

Requested Patent: ☐ DE4029687

Application Number: DE19904029687 19900919

Priority Number(s): DE19904029687 19900919

IPC Classification: H01S3/082

EPC Classification: H01S3/082D0

Abstract

The laser resonator has an exit mirror (12), an angular dispersion element (14) and a device (28) for widening the laser beam incident on the latter. A filter (30) lies in the path of the beam between the beam widening device (28) and the exit mirror (12), or between the individual elements (P1, P2, P3) of the beam widening elements (28).

Pref. the filter (30) is an etalon which exhibits a bandwidth which is at least double the that of the resonator (10) with the beam widening device (28), but without the filter (30).

USE - E.g. in photolithography or micro-material processing.
